O_2 requirement (consumption) 200
Obese *fa/fa* rats 52
Oestradiol-17β 274
Olfaction 374
Olfactory cilia 374
Oocytes 247
Opioid receptor 131
Organic anions 286
– cations 286
Oscillations 218, 416
Osmoregulation 530
Osmotic gradient 17
Ouabain 314, 416
Outward K^+ current 486
Oxalate 455
Oxidative capacity 578
– stress 295
2-oxoglutarate uptake 329
Oxygen transport 578

P

P_2 receptor 224
Pacemaker cells 97
PAH-transporter 286
Pancreatic B cells 289
Papillary muscle 519
Paraaminohippurate, PAH 286
Paracellular routes 17
Paralysis 552
Patch-clamp 7, 22, 37, 67, 108, 117, 125, 131, 209, 230, 238, 364, 374, 381, 447, 473, 516, 530, 598
– technique 558
Perforated vesicles 209
Perfused rat kidney 155
Perfused-cuvette method 400
Permeant cyclic AMP derivates 523
Pertussis toxin 131, 510
pH regulation 591
Phasic muscle 43
Phenolphthalein dyes 455
Phorbol 12,13-dibutylate (PDBu) 539
– esters 82, 247
Phosphatase 138
– inhibitors 138
Phosphocreatine circuit 270
Phosphoinositide 82
Phospholipase A_2 inhibitor, quinacrine 530
Phosphopeptide fragment 138
Phosphorylation 82, 97
– potentials 188
Photoreceptor(s) 90, 469
pH-sensitive dye 523
Pituitary 558
– intermediate lobe cells 364
– slice preparation 364
Polyethylene glycol 17, 218
Polymyxin B 209
Portal vein 22, 125, 539
Posterior pituitary 558
Post-iontophoretic burst 513
Postnatal development 26
Potassium channels 94, 469, 558
Potassium current(s) 37, 117, 431
– ion 94
– secretion 163
Prazosin 131
Pressure clamp 606
Prevertebral sympathetic ganglion 7
Primary cultures 59, 523
Propidium iodide 322
Propranolol 131
Prostaglandins 163
Protein kinase A activation 425
– – blockers 566
– – C 82, 431, 539
– – – regulation 247
Proximal renal tubule 455
PTH-stimulated Na^+ pathway 314
Pulmonary artery 94, 97
Purine release 188
Pyruvate 188

Q

Quantal distributions 364
Quin-2-loaded cells 497
Quinacrine 530
Quinine 117
Quinpirole 302

R

Rapid step pulse activation 606
RAS oncogene 416
α_2 Receptor 230
Receptor neuron 374
Rectifier delayed 37
– K^+ current 22
Rectifying potassium currents 431
Regional capillary perfusion 336
Regulation β-agonists 440
Regulatory volume decrease 530
Reinnervating skeletal muscle 256
Relaxation 350
Renal blood flow 585
– brush-border 168
– cell swelling 314
– contraluminal transport systems 286
– distal tubule 307
– epithelial cell 503
– perfusion pressure 585
– tubule 455, 523
– tubules, single 302
– vascular tone 155
Renin release 466
– secretion 155
Reserved Na^+/Ca^{2+} exchange 497
Respiratory heat loss 204
– minute volume 204
– reflexes 280
Resting potential 566
Retinal rods 90
Reuptake of Ca^{2+} 539
Rigor tension 343
Ryanodine 519
Ryanodine depression 1

S

Sarcolemma 26, 108
Sarcolemmal CA 357
Sarcoplasmic reticulum 1, 26, 519
SCH 28080 591
Seawater-adapted eel intestine 146
Selective brain colling 204
Shear stress 394
Signal transduction 82
Single human ventricular cell 176
– muscle fibre 270
– smooth muscle cells 22, 117
– -channel activity 431
– – currents 364
– – recordings 108
SITS 146
SITS-inhibitable HCO_3^- transport 146
Skeletal muscle 101, 108, 256, 270, 274, 295, 510, 566, 578
– – cells 572
– – fibres 510

Skinned fibres 388
– myocardial fibers 1
Sliding velocity 32
Slow force responses 519
– inward current 176
– waves 67
– -wave frequency 492
Small intestine 17
– -conductance chloride channels 447
– -intestinal crypts 598
Smooth muscle 67, 539
– – cells 22, 37, 43, 117, 125, 391
Snake renal brush-border membrane 168
Sodium azide 289
– channel inactivation 283
– channels 262, 552
– current 7
– -coupled transport 168
– /potassium ATPase 163
– -taurine cotransport 168
Soleus muscle 350
Spiking activity 492
Staphylococcus aureus 299
Staurosporine 431
Stilbene sensitivity 447
Stimulus-secretion coupling 289
Submandibular glands 82
Substrate specificity 455
Succinate 329
Succinic dehydrogenase activity 77
Sulfonylureas 292
Sulfonylurea-sensitive K^+ channels 292
Sulphamoyl diuretics 455
Sulphate exchange system 455
Sympathetic ganglion 7
– neurons 7
Synaptic transmission 256, 364

T

Taurine 168
TEA 22
Tedisamil 22
Testosterone 274
Tetraethylammonium 117, 292
– (TEA) 292
Tetrandrine 558
Tetrodotoxin 262
– sensitivity 262
Thiadiazinone 388
Thiazide diuretics 314
– -sensitive Na–Cl cotransport 307
– – Na^+-Cl^- cotransport 314
Thiobarbituric acid-reactive substance (TBARS) 295
Thyroid hormone(s) 26, 425
Thyroid-hormone-induced changes 350
Torbafylline 336
Toxin I 117
Training 77, 274
Transcellular and paracellular routes 17
Transduction 374
Transient outward current 117, 486
Transmitter-induced changes 224
Triton-treated rat ventricular trabeculae 343
Trunk temperature 204
TTP 224
TTX binding affinity 262
– -sensitive Ca^{2+} channels 7
– – Na^+ channels 7
Twitch force 519

U

Urinary bladder 406
UTP 224

V

Vagal A and C fibres 280
– fibres 280
Vas deferens 43
Vascular endothelial cells 394
– resistance 585
– smooth muscle 539
– – – cells 391
Vasoactive intestinal polypeptide 598
Vasoconstriction 97
Vasodilators 67
Vasopressin V_1-antagonist 406
Ventilatory response 200
Ventricular myocytes 409, 425, 440
– trabeculae 343
Verapamil 117, 155, 416
Video microscopy 523
Vision 469
Voltage-clamp 510
– -dependent Ca^{2+} channels 131
– -sensitive chloride channels 209

W

Water handling 17
– pathways 17
– transport 406
White-noise-modulated current injection 469
Whole-cell recordings 101

X

Xenopus oocytes 247, 606

Z

Zinc 416
Zn ions 209
